

Kingston Safety & Relief Valves

# Kingston Model 119CSS

ASME Code High Flow Safety Valve  
Brass, Stainless Steel Ball

## Features:

- High Flow Capacity
- Precision Machined Hard Seat
- Brass Construction
- Stainless Steel Ball & Spring
- Lever for Manual Testing
- ASME Certified - Stamped UV + NB
- Registered in All Canadian Provinces & Territories
- Maximum Temperature 400°F
- Set Pressure Range 25-300 PSIG
- Every Safety Valve Factory Set and Tested

## Materials

No.	Part Name	Materials
1	Body	Brass
3	Stem Assembly	Brass Stem, Stainless Steel Ball
4	Spring	Stainless Steel
5	Adjusting Screw	Brass
6	Cap Screw	Brass
7	Cap	Brass plated Zinc
8	Lever	Stainless Steel
9	Seal	Vinyl

## Product Notes

All Kingston Safety Valves are manufactured under a quality control system accepted by the National Board of Boiler and Pressure Vessel Inspectors.

Code valves are capacity certified by the National Board, manufactured in accordance with ASME Code, set and sealed at the factory.

Set pressure can deviate from the marked by  $\pm 2$  psig at or below 70 psig set pressures and  $\pm 3\%$  psig above 70 psig.

Factory standard seat tightness for hard seat valves: no audible leakage at 20% below nameplate set. It is normal for spring-operated safety valves to exhibit leakage or simmer/warn, as the system operating pressure approaches the set pressure. For hard seat valves this typically occurs at pressures at or above 80% of nameplate set pressure.

At very low set pressures (20 psi and below), the ratio of the downward spring force as compared to the upward pressure force is very small. In these cases it may be impossible to achieve seat tightness.

Soft seat valves will typically provide a higher degree of seat tightness than metal, hard seats. Factory standard seat tightness does not ensure bubble-tight seal regardless of material.

Final application design and integration of Kingston Products are the sole responsibility of the end user.
